

# EXPORTABLE POWER OPTIONS FOR UTVS

The Ranger® HIPPO and HIPPO PRO XD are a collaboration between Polaris® Defense and HIPPO Multipower to produce an ultra-light, all-terrain alternative to the traditional maintenance contact vehicle. These models allows you to access remote worksites by

combining the off-road capabilities of the Polaris UTV with the HIPPO 1041P. They are hydraulic, air, electric and welding powerhouses in a single unit, powered by the UTV's diesel engine. And with only a single engine to maintain, the Ranger HIPPO and HIPPO PRO XD reduce maintenance time, thereby increasing productivity.

HYDRAULIC

ELECTRIC

AIR

WELDING

HIPPO Multipower, with input from the Program Manager for the Family of Special Operations Vehiclars (PM-FOSOV), has developed a generator for the MRZR family of UTV, which exports up to 9 kW of power at 24VDC. Applications include Battery Charging, ECM, Radio Retransmission, Surveillance Equipment, Power Tools, Directed Energy and (with an inverter) shore power. The generator fits below the payload area of the vehicle leaving OEM specifications of the area unchanged. The generator draws its power from the diesel engine of the MRZR so there is no requirement for any alternative fuel source.
